EDUCATION

University of Toronto **Toronto, ON**

Master of Engineering, Electrical & Computer Engineering Expected Sep 2027

- Director of Academics, Google Developer Group; Vice President, ECEGSS; GSU Council Representative.

McMaster University **Hamilton, ON**

Bachelor of Technology, Software Engineering Technology Aug 2026

- Founder & President, McMaster Open Source Society, Student Representative Assembly Representative.

PROFESSIONAL EXPERIENCE

Ontario Lottery and Gaming Corporation (OLG) **Toronto, ON**

AI Systems Engineer Intern Jan 2026 – Aug 2026

- Developed **real-time computer vision pipelines** using TensorFlow, YOLOv8, MediaPipe, and MoveNet for automated person tracking, pose estimation, and behavioural analysis in safer gambling applications.
- Reduced manual deployment verification by **approximately 35% across 25+ enterprise releases** through Azure CI/CD automation, regression checks, and release-readiness validation of gaming systems.
- Engineered **AI-driven self-healing workflows** with Dynatrace and Playwright to detect application failures, investigate root causes, and automate remediation across enterprise gaming environments.
- Maintained **enterprise AI platforms** by troubleshooting Linux/Windows infrastructure and system integrations.

Ontario Ministry of Transportation (MTO) **North York, ON**

Software Engineering Associate May 2025 – Dec 2025

- Reduced manual LIMS testing effort by **approximately 75%** by developing automated test utilities and CI/CD components to validate enterprise laboratory workflows consistently across releases.
- Achieved **98%+ test pass rates** through validation of LIMS functionality, data integrity, and AODA/WCAG accessibility compliance, helping teams identify defects during release testing.

Kinectrics **Etobicoke, ON**

Systems & Automation Engineering Student Jan 2023 – Apr 2023

- Reduced system validation runtime by **30%** and manual effort by **25%** through PowerShell test automation.
- Improved configuration reliability through automated vulnerability scans and system checks, identifying inconsistent settings and supporting repeatable validation across Windows and Linux environments.

TECHNICAL PROJECTS

Real-Time Computer Vision & Behavioral Analysis System

Python, YOLOv8, OpenCV, ByteTrack, PyTorch

- Built a **real-time multi-person tracking system** combining YOLOv8, ByteTrack, pose estimation, and per-person temporal state to detect gestures and behavioural events in live or recorded video.
- Benchmarked **MLP**, **MobileNetV2**, and **S3D** on 120 held-out videos, selecting a pose-based MLP with 0.262 ms CPU inference latency in historical testing, without requiring a second model backbone.

Multi-Agent LLM Chatroom

TypeScript, React, Node.js, Express, PostgreSQL, REST APIs

- Built a full-stack chatroom coordinating up to **3 configurable AI agents** through independent responses, cross-agent critique, and moderated summaries that highlight agreements and disagreements.
- Engineered a **TypeScript/Express API gateway** with model allowlists, rate limits, and request validation; added PostgreSQL analytics to monitor API usage and token consumption without persisting chat content.

Course Availability Monitoring & Notification System

Python, JavaScript, Chrome/Firefox Extensions, Automation

- Extended an open-source course monitoring system with **real-time seat tracking**, historical availability charts, and configurable browser/email alerts to notify students when course sections reopen.

SKILLS & DISTINCTIONS

- **Languages & AI/ML:** Python, SQL, C++, C#, TypeScript, JavaScript, PyTorch, TensorFlow, OpenCV, YOLOv8.
- **Software & Cloud:** Azure, Linux, Docker, CI/CD, Git, React, Node.js, Express, PostgreSQL, REST APIs.
- **President's Honour List:** Winter 2022, Summer 2022, Fall 2023, Winter 2024.
